

## System Overview

The Shur-Cover is an electrically powered sheeting system operating from Side to Side which is suitable for both rigid vehicle and trailer applications. The Shur-Cover electric sheeting system provides both load containment and weather protection offering a water proof seal and excellent heat retention.

The Shur-Cover is an extremely versatile system that is suitable for a range of applications such as aggregate, asphalt, grain, feed, waste, and offers the best value for money in the market. Typically configured to rotate from left to right when covering the load, but also available in reserve roll if required the Shur-Cover sheeting system is capable of securely covering heaped loads in less than 10 seconds.

## Shur-Cover Key Features

The Shur-Cover truck sheeting system is a very versatile solution for aggregate, asphalt, grain, feed and waste applications.

- \* Health & Safety Compliant.
